(57) Abstract: A wraparound canceller capable of performing adaptive operation to follow a wraparound wave, a parent station wave phase, and temporal level fluctuation at a high speed and with a high accuracy as well as reducing the device size. By limiting the number of data items of the transmission path characteristic estimation section and performing the extension to the entire band by 0 insert at the frequency region and windowing after the time region conversion instead of performing interpolation, the speed of adaptive operation of the wraparound canceller is increased because of the reduction in the number of processing data items. Accordingly, it is possible to realize a high capability to follow the wraparound wave, parent station wave phase, and the temporal level fluctuation and the internal processing becomes more accurate. Consequently, a highly accurate canceling operation can be performed and the circuit size is reduced, thereby realizing the reduced size of the device as a beneficial effect.

(57) 要約: 回り込み波や親局波の位相やレベルの時間変動に追従する適応動作を高速、高精度に行うことと、装置を小型にする回り込みキャンセラ。伝送路特性推定部のデータ点数を限定し、帯域全体への拡張を補間によらず周波数領域での 0 挿入と時間領域変換後の窓がけによって行うことによって、処理データ点数の減少で回り込みキャンセラの適応動作が高速になるため、回り込み波や親局波の位相やレベルの時間変動に対する高い追従性を実現し、内部での処理がより高精度になるため、高精度なキャンセル動作を行い、回路規模が小さくなるため、装置の小型を実現するという有利な効果が得られる。
